DRAWING 2960/2 DETAILED LANDSCAPE PROPOSALS

(To be read in conjunction with drawing 2960/2 entitled Detailed Landscape Proposals)

1.0 INTRODUCTION

1.1 Purpose of Report

1.1.1 The purpose of this report is to set out clearly the basic management/maintenance techniques appropriate to this site up to Year 5 in detail and basic recommendations to beyond Year 5.

1.1.2 For the purpose of this report, on newly created landscapes, Year 1 begins 12 months after practical completion has been achieved, and the Defects Liability and Aftercare Period have been served and the site handed over.

1.1.3 The 12 months Aftercare Period should have included the following items:

- Maintaining a weed and litter free site
- Herbicide and fertiliser applications
- Ensuring mulch mats are secure and missing ones replaced
- Ensuring bark mulch is evenly spread to specified depth and is replenished as necessary
- Watering through periods without significant rainfall
- Replacing plants that have died in the 12 months since practical completion was achieved.

1.1.4 Generally all the planting should be according to the relevant drawing, in a healthy condition, and free from litter and competition from weed growth.

1.2 Maintenance Aims

The general aims of the management/maintenance plan are to present guidelines that enable the landscape to achieve the original design and planning objectives whilst maintaining a presentable appearance at all times.

1.3 The Specification

The various landscape elements are collated together under the headings below and their treatment is described in detail year by year up to Year 5 and with basic recommendations beyond Year 5.

Section 2.0	Existing Trees and Vegetation
Section 3.0	Grass Areas
Section 4.0	New Specimen Trees
Section 5.0	Wildflower Areas
Section 6.0	Groundcover Shrubs
Section 7.0	Shrub Beds

1.4 General Maintenance Application to all Years

1.4.1 Maintain existing hedge line litter free.

1.4.2 Do not allow adjacent householders to deposit rubbish, grass cuttings, or other deleterious materials within the hedge line.

1.4.3 Maintain all soft landscape areas weed free until planting has become established.

2.0 EXISTING TREES AND VEGETATION (see drawing for location and extent)

2.1 Maintenance Objective

The aim is to retain the existing character of the trees and hedge line, ensuring the health and safety of all specimens contained therein.

2.2 Year 1 and beyond

Inspect all existing trees on an annual basis and remove any deadwood. Cut back any limbs and hedges overhanging footpaths. Fell any tree that has become damaged. Cut up and remove branches. Major limbs to be cut up and left on site to provide a habitat for invertebrates. Replace with Feathered tree of same species, together with stake and tie, and maintain as New Specimen Trees (see Section 4).

3.0 GRASS AREAS (see drawing for location and extent)

3.1 Maintenance Objective

The maintenance objective is to provide an even standard of vegetation of uniform height and colour comprising of predominantly grass species, with no more than 5% dicotyledenous plants.

3.2 Maintenance Operations – Year 1 and beyond

Mowing shall be carried out using a cylinder rotary mower where appropriate to maintain the vegetation within the limits of 20mm and 50mm during April to September inclusive and between 30mm and 60mm during the rest of the year. The clippings may be returned but must be distributed evenly over the surface, and at no time shall the layer of clippings be of such a depth that will affect the growth of the sward.

3.2.1 Where necessary grass area may be sprayed overall with a suitable approved selective herbicide in accordance with the manufacturer's instructions. Alternatively, spot weeding of isolated weed infestation may be carried out.

3.2.2 Scarify grass annually in the autumn.

3.2.3 Apply organic fertiliser in the spring and autumn.

3.2.4 Spike for aeration to 150mm depth annually.

3.2.5 Remove all litter, debris, and deleterious material from the site at regular intervals and prior to mowings.

3.2.6 All edges of grass areas, against buildings, footpaths, roadways, trees, posts, and any other obstructions shall be kept neat and tidy by use of hand/mechanical edge trimmer or herbicide as appropriate.

3.2.7 Reinstatement by re-turfing or re-seeding of worn areas shall be undertaken as necessary and at the appropriate time of year.

4.0 NEW SPECIMEN TREES (see drawing for details of species)

4.1 Maintenance Objective

Establish a stable and healthily growing tree within three years from planting with a well-shaped framework for future growth.

4.2 Maintenance Operations - Year 1

4.2.1 One metre diameter circle to be maintained weed free around all specimen trees. Circle to be topped up with mulch and spot treated as necessary to maintain weed free. The bases of trees in planted beds to be absorbed into the general maintenance of the areas in which they occur.

4.2.2 All dead and missing specimen trees or trees which fail to develop properly during the first season after planting shall be replaced. Specification for replacements shall be the same as for their originals.

4.2.3 Water newly planted trees throughout the summer months (May to August) at fortnightly intervals after any period of four weeks without significant rainfall (less than 5mm). Apply sufficient water to thoroughly wet the top 150mm of soil around the tree roots. This will normally require 10 litres for a seedling or whip and 20 litres for a standard tree.

4.2.4 Check stakes and ties for firmness and support and adjust or replace as necessary. Check once a year in late spring.

4.2.5 Firm the soil around the roots to ensure that the tree is securely planted in the ground and upright.

4.2.6 Formative prune the tree to remove any dead, diseased or damaged shoots and create a balanced form for future growth.

4.3 Year 2

4.3.1 Begin phased removal of tree stakes and ties beginning with the stakes of the most vigorous and established trees, except in special circumstances.

4.3.2 Repeat procedures 4.2.1 to 4.2.3 inclusive.

4.3.3 Apply organic fertiliser prior to commencement of growing season at a rate of 30 litres per tree.

4.4 Year 3

4.4.1 Continue phased removal of tree stakes and ties beginning with the stakes of the most vigorous and established trees, except in special circumstances.

4.4.2 Repeat procedures 4.2.1 to 4.2.3 inclusive.

4.4.3 Thin out competing species of plants around the bases of specimen trees occurring in planted beds to reduce competition.

4.4.4 Apply organic fertiliser prior to commencement of growing season at a rate of 30 litres per tree.

4.5 Year 4

4.5.1 Continue phased removal of tree stakes and ties beginning with the stakes of the most vigorous and established trees, except in special circumstances.

4.5.2 Repeat procedures 4.2.1 to 4.2.3 inclusive.

4.5.3 Apply organic fertiliser prior to commencement of growing season at a rate of 30 litres per tree.

4.6 Year 5 and beyond

Repeat procedures 4.2.1 to 4.2.3 inclusive.

5.0 WILDFLOWER AREAS (see drawing for location, extent and specification)**5.1 Maintenance Objective**

The purpose of this wildflower meadow is to form an attractive grassed area with diverse grassland species that will increase the habitat diversity of the open space.

5.2 Maintenance Operations - Year 1

Cut twice per annum once in June and once in September, and remove arisings off site. Height of cut to be 50mm. Re-seed any areas that do not establish. Maintain free of invasive weeds by spot treating with herbicide (or by hand weeding in areas adjacent to any watercourse).

5.3 Year 2 onwards

Cut twice per annum once in June and once in September, and remove arisings off site. Height to be minimum 50mm.

6.0 GROUNDCOVER SHRUBS (see drawing for details of species)**6.1 Maintenance Objective**

To create a bosage of groundcover plants adjacent to footpaths and roadways which gives a neat edge to woodland species and reduces weed infestation and necessary maintenance operations

6.2 Maintenance Operations - Year 1

6.2.1 Maintain the soil surface substantially free of weeds (less than 5% weed cover) by spot treating with Glyphosate or approved equivalent during the growing season.

6.2.2 Top up mulch as required in order to achieve 75mm depth.

6.2.3 Replace any dead or missing plants to the original specification.

6.2.4 Apply organic fertiliser prior to commencement of the growing season, except adjacent to any watercourses, prior to re-mulching any bare areas where necessary.

- 6.2.5 Apply fungicide/insecticide to any plants suffering from fungal infection or insect attack in accordance with manufacturer's instructions.
- 6.2.6 Prune the shrubs as much as is necessary to achieve their desirable ornamental features (flowering, autumn colours, overcrowded, leggy plants etc), following sound horticultural practices, and to prevent them overgrowing footpaths or blocking light to windows.
- 6.2.7 Remove all arisings from site as well as any damaged dead or diseased parts of the shrub.
- 6.3 **Year 2**
Repeat all the procedures as in Year 1.
- 6.4 **Year 3 and beyond**
- 6.4.1 The groundcover beds should be substantially complete now, and require only minor gaps to be filled, and weeds removed by hand or application of herbicide as necessary, in order to maintain cover according to the original specification.
- 6.4.2 Beds should be checked annually for signs of disease or excessive weed growth and treated according to the operations described above.
- 7.0 **SHRUB BEDS** (see drawing for details of species)
- 7.1 **Maintenance Objective**
To maintain a boscage of shrub growth to cover as much as possible of the border area and allowing the individual plants to achieve as nearly as possible their natural form. Maintain the borders free of visible weeds and shape and prune the shrubs to avoid obstructing pathways or blocking light to windows.
- 7.2 **Maintenance Operations - Year 1**
- 7.2.1 Immediately after planting, and thereafter yearly, in the appropriate season for the species involved, prune the shrubs to develop their desirable ornamental characteristics. At the same time remove intermediate plants that are restricting the natural and attractive development of their neighbours. These plants may be used to fill gaps produced elsewhere in the scheme where species have not been as successful in their development. Remove all arisings from site.
- 7.2.2 Carry out appropriate maintenance operations as indicated on the planting schedule on the landscape drawing. The following maintenance operations to be applied as appropriate to the relevant species:
- Hard prune March – April (where species flowers on current year's wood)
 - Remove flower wood after flowering (where species flowers on last year's wood)
 - Clip or trim to maintain shape and bushy habit.
- 7.2.3 Maintain the soil surface substantially free of weeds (less than 5% weed cover) by spot treating with Glyphosate or approved equivalent during the growing season.
- 7.2.4 Top up mulch to 75mm depth as required.

7.2.5 Replace any dead or missing plants to the original specification.

7.3 **Year 2**

7.3.1 Prune the shrubs as much as is necessary to achieve their desirable ornamental features (flowering, autumn colours, overcrowded, leggy plants etc.), following sound horticultural practices, and to prevent them overgrowing footpaths or blocking light to windows. Carry out any maintenance operations as indicated in Item 7.2.2.

7.3.2 Remove all arisings from site as well as any damaged dead or diseased parts of the shrub.

7.3.3 Maintain any visible surface soil free of weeds as specified for newly planted borders.

7.3.4 Apply organic fertiliser prior to commencement of the growing season, except adjacent to any watercourses, prior to re-mulching any bare areas where necessary.

7.3.5 Apply fungicide/insecticide to any plants suffering from fungal infection or insect attack as per manufacturer's instructions.

7.4 **Year 3 & Year 4**

7.4.1 Repeat all the procedures as in Year 2.

7.4.2 Maintain any visible surface soil free of weeds (less than 5% weed cover) by applying an annual dressing of approved residual herbicide in the winter months and spot treating with Glyphosate or approved equivalent during the growing season.

7.5 **Year 5**

7.5.1 Repeat all the procedures as in Year 2 except item 7.3.4.

7.5.2 Thin out over mature plants that are becoming unsightly and have outgrown their useful life. Replace these with young plants as per the original specification where gaps remain.

7.6 **Beyond Year 5**

The above 5-year cycle should be repeated thereafter except omit Item 7.3.4. Maintain bare patches weed and litter free, however allow the growth of self-seeded, regenerated shrub species. Formative prune shrubs as required to achieve their desirable ornamental features as Item 7.2.2.
